

## Body

Slim body with antibacterial effect.  
SUS304 White ivory and stainless body.

It has a power of disinfection in itself as it painted baking by coating material mixed in titanic oxide.

## Negative ion generator (constantly generates)

$10^7$ 個/cm<sup>3</sup>

## Middle-sized quartz UV lamp (constantly lights)

60w×2 / 24hours lighting

## Small-sized quartz oxygen lamp (constantly deodorize and disinfect)

80w×3 / 24hours lighting

## Ag+filter (removes dust)

Antibacterial filter Ag+silver ion filter

## W-Fan (forced circulation)

Double fan enables circulator to be more silently than that of the MTS series supplying.

## Oxidized titanium photo catalyst (constantly deodorizing, disinfecting and protecting lamp)

Coiled plasma photo catalyst.

## Plasma photo catalyst

If titanic oxide is in under the UV rays, it will generate active oxygen at the surface and it will resolve organic matter into water and carbonic anhydride by its powerful oxidizability. This effect of "photocatalyst" is used to clean and deodorize air. As impurities are absorbed, lamp can be protected and long lasting used. It is economical because it can be regenerated after washing.

## Negative ion generator

Generated negative ion makes oxidized body normal again and feeling calm.

## Quartz tube ozone lamp

It is High effective in productivity and not subjected to humidity and temperature. Ozone has a strong power of disinfecting and deodorization, and as it can be changed into oxygen quickly, it is likely left no residual material. **Using lamp system offers safety without risk of harmful Nox.**

Absorbing impure substance enables lamp to be protected and used longer.

## UV disinfecting quartz tube lamp

Our UV lamp is accepted product by EPA, (Environmental Protection Agency). It has a high power of output and disinfection and it lasts longer than the conventional type. Compared to heating method and chemical method, it offers better cost performance and being quite economical.

TECO original disinfect, deodorize and ant-vermin system.

## Patented anti-vermin system

It prevents vermin without chemicals

It offers W-block (CC power) to cut and catch vermin. Cardinal factor of getting warm is UV ray of fluorescent and odors from garbage.

- Anti-vermin fluorescent cover cuts the UV rays.
- SPACE CLEAN cuts the unpleasant odors.
- Optional insect collector catches vermin.

Superadded to the SPACE CLEAN.  
Deodorizing and washing in  
the best-assured way.

※ Photo : TM-140

## [ Main for deodorizing and cleaning Type ]

Spitting up low concentrative ozone and negative ion for 24hours.

## SPACE CLEAN plus Installation case examples.
